Exercise 2.5: Django MVT Revisited

1. In your own words, explain Django static files and how Django handles them.

Django static files are files that don't change, such as CSS, JavaScript, and images. Django handles them by serving them from a specific URL, which is defined by the STATIC_URL setting. Django looks for static files in the static folders of each app, as well as in the directories listed in the STATICFILES_DIRS setting.

2. Look up the following two Django packages on Django's official documentation and/or other trusted sources. Write a brief description of each.

Package	Description
ListView	A view that displays a list of objects from a model. It's a built-in view in Django that provides a convenient way to display a list of items.
DetailView	A view that displays the details of a single object from a model. It's a built-in view in Django that provides a convenient way to display detailed information about a specific item.
